**Upcoming UK Health Protection Agency measurements on CFLs**

The UK Health Protection Agency is planning to publish measurements on radiations related to compact fluorescent lamps (CFLs) for domestic applications. This data is aiming to measure the possible impact on health of CFLs regarding UV emissions, low frequency flicker and colour quality.

The ELC welcomes any new data published on CFLs and is already in contact with the UK Health Protection Agency regarding their measurement data. Based on this assessment, the ELC will seek further discussion and cooperation with the UK Health Agency.

Energy saving lamps manufactured and put on the market by ELC members fully comply with European and national health and safety requirements. All lamp packaging carry a CE-Mark since January 1998.
